

# MicroMain FM

## Computer Aided Facilities Management

### Taking Facility Management to the Next Level

MicroMain FM™ gives you the tools you need to improve facility management and reduce costs. Data-enabled drawings—facility CAD drawings dynamically integrated with your facility information—enable you to visualize your facilities and manage more efficiently.

Use the software for space planning, move management, maintenance and operations management, and security and administrative services. Delivered with source code, at no additional cost, MicroMain FM gives you complete control and flexibility.

Easy to understand and easy to use,  
MicroMain FM uses data-enabled drawings to help you:

#### Track People, Assets and Projects

- Locate occupants, tenants, or staff.
- Find current assets.
- Track equipment by type, location, or department.
- View move and asset work history.
- Add drawings to maintenance work orders.
- Store global project details.
- Track time/costs and view project status.

#### Plan for Emergencies and Problems

- Use drawings for emergency planning.
- View all areas, including exit routes and facility equipment.
- Display detailed facility infrastructure, including utilities.
- Trace problems to their solutions graphically.

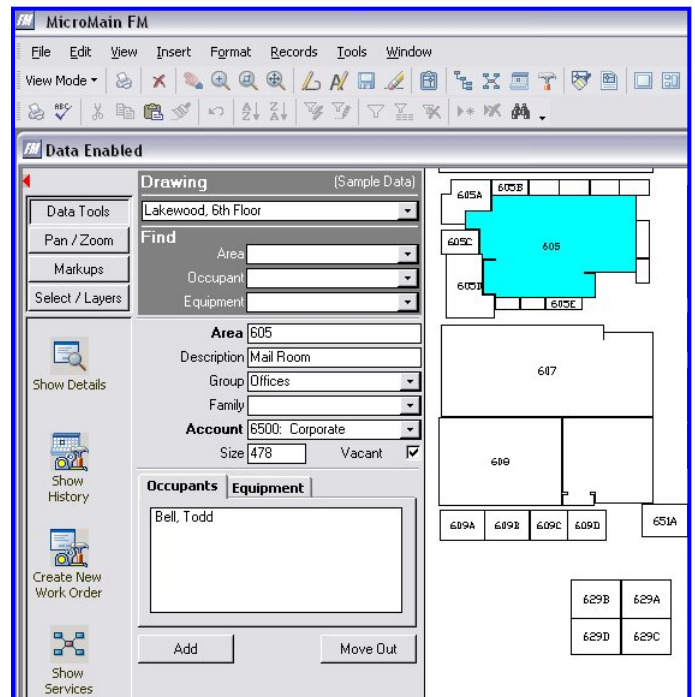

#### Collaborate with Others

- Markup and share data-enabled drawings electronically.
- Designate others to add markups.
- Save time with detailed text and graphics added to facility drawings.

You can also easily generate reports with drawings and data.  
More than 60 predefined reports and unlimited customizations  
let you report on facility operations—your way.

**fmWEB**

Use the fmWEB™ module to extend MicroMain FM's functionality to the Internet. Tools are also available for linking data to your existing drawings.

Easily keep track of FM operations—including people, areas, equipment, and utility information. Visualize your facility in a new way with dynamic data-enabled drawings.
