

MicroMain XM

Computerized Maintenance Management System

Asset Management. That Works.

MicroMain XM™ gives you the tools you need to streamline maintenance operations, maximize productivity and reduce costs. Use the software to automate work orders, schedule preventive maintenance, track assets and control inventory. Track costs, labor, materials and more in 300-plus standard reports, too. Delivered with source code, at no additional cost, MicroMain XM gives you complete control and flexibility.

Easy to understand and easy to use, MicroMain XM helps you:

Improve Work Flow

- Create a work order in 6 mouse clicks.
- Send work orders to printers, pagers, PDA/Pocket PC devices, or via email (including to mobile phones).
- Manage multiple projects.
- Add labor, parts, tools and diagrams to work orders.
- Automatically create corrective work orders from failed inspection points.
- Use RFID and barcodes.

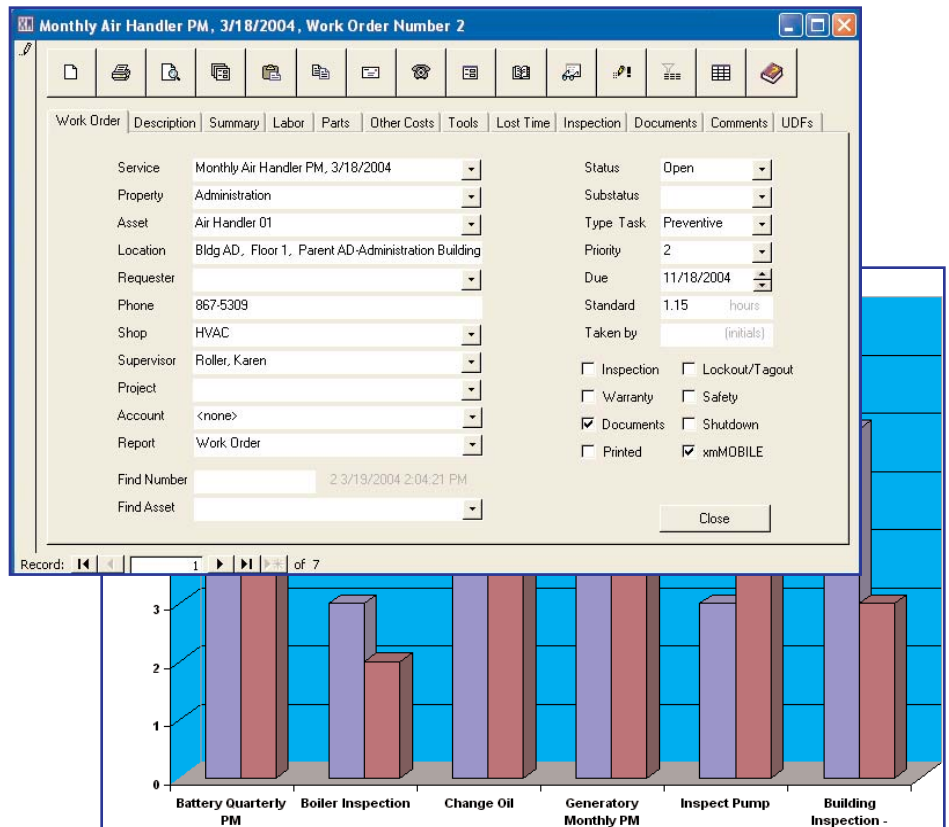

Increase Asset Life

- Schedule PMs with easy calendar control.
- Manage fleet, including VMRS support.
- Assess current condition of assets.
- Link to maintenance histories.
- Track equipment downtime and take steps to increase useful life.

Report Progress and Results

- Utilize hundreds of standard reports or create your own.
- Analyze task and overall productivity.
- Track total cost of ownership (TCO) for all assets.

You can also issue purchase orders, track inventory, assign labor, and manage maintenance—your way.

Easily keep track of maintenance—including assets, parts, labor, status of work, and costs. Reports and graphs show results.

Use add-on modules to extend MicroMain XM's functionality. Use mobile devices for work orders, RFID readers/barcode scanners for asset tracking or inventory, the Internet for work requests, and more!
